教育背景

2011~2015	华中师范大学			电子信息工程			
	武汉大学				英语语言文学		
2015 ~	TU Chemnitz (Germany)	Robotic方向			Automotive software Engineering		
自修课程	cs231n Convolutional neural network (FeiFei-Li)						
	cs229 Machine Learning (Andrew Ng)						

- 实习经历

BMW 语音控制测试实习生			2016.03-2016.09			
	● 作为语音控制组实习生,主要负责自然语言处理测试,编写以及维护测试用例以及组内相关文档,用Python协助management组开发每周的					
	testcase 筛选系统,以管理整个department的测试进度以及test coverage,并以可视化的图表展示各个team的效率					
	编写VBA脚本自动化处理测试用例,编写Python脚本将测试用例批量上传到ALM服务器端,编写拨打语音号码的JSON文件					
	● 更新Nuance提供的最新的HMI版本	到HU,	参与部分	▶源码的c	lebug工作	
基于RANSAC 的人行				2016	5.10-2017.02	
● 基于ADTF中激光雷达所获得的点云,识别其中的人行道部分						
	● 基于RANSAC识别出来人行道所在的平面					
	● 基于区域增长算法对所获得的平面进行分割得出人行道的部分					
	•					
	校园经历					
机器人, TU-Chemnit	z					
	● 作为Dr. John Nassour实验室下的	研究学	生,在人刑	杉机器人 I	Nao上使用其	
	图像,语音和运动学的库,实现Nao的运动学特性,与周围环境的交互及					

	语音交互 python编写				
	基于Multi-layer multi-pattern CPG model的不同的pattern以实现不同的				
	运动模式,改变Pattern中的sigma_s等参数实现joint以不同的频率运动				
	• 基于OpenCV库将有色小球识别并跟踪,始终使小球在视野中心,最初算				
	法是将视野分割为9个不同的区域,根据不同的区域做出相应的				
	movement,后将算法改进取消区域分割,建立一个反馈函数实现跟灵敏				
	的跟随效果				
	• 根据Nao的足部传感器,判断机器人是否迈出一步,并计算迈步频率,				
	据自己map到的频率与pattern参数之间曲线,在机器人行走的过程。				
	通过接触特定传感器使手臂关节stiffness置0,从而教机器人走路,在				
	个 "teaching"的过程中,Nao会自适应地改变pattern从而适应所教授				
	新频率				
ASE Lab, Informatik	, TU-Chemnitz				
	The target is a given dot cloud generated by LiDAR.				
	The aim is to recognize the slide walk in the dot cloud in ADTF.				
	Recognize the plain which the slide walk lies and then split the plain				
	get the slide walk.				
Machine Learning La	ab, Informatik, TU-Chemnitz				
	 Using the Perceptron algorithm and logistic algorithm to separate t 				
	Using the Perceptron algorithm and logistic algorithm to separate to data sets.				
	data sets. • Using MLP to train a model to recognize hand written numbers.
